

Feasibility Studies

KEIRON will carry out research and experiment according to your defined designs, requirements, and specifications. This will allow you to validate LIFT technology for your challenges.

Prototyping Equipment

LIFT equipment that is made with the purpose to print and produce prototype products for device developers and manufacturers. This tool will help you extensively validate the LIFT process for your specific production needs.

Visualization Equipment

Specialized LIFT equipment in order to optimize materials for the LIFT process and experiment with the technology. This tool is made for material suppliers to ensure early market penetration with specialized inks and pastes for the emerging LIFT printing method.
