

## Water Sensor Products

Brewer Science offers automated water quality detection and process platform to detect presence of analytes including nitrates, dissolved oxygen and heavy metals.

Features:

- Easily accessible and replaceable in a plug-and-play system
- Disposable
- Real-time continuous monitoring
- Array configurable

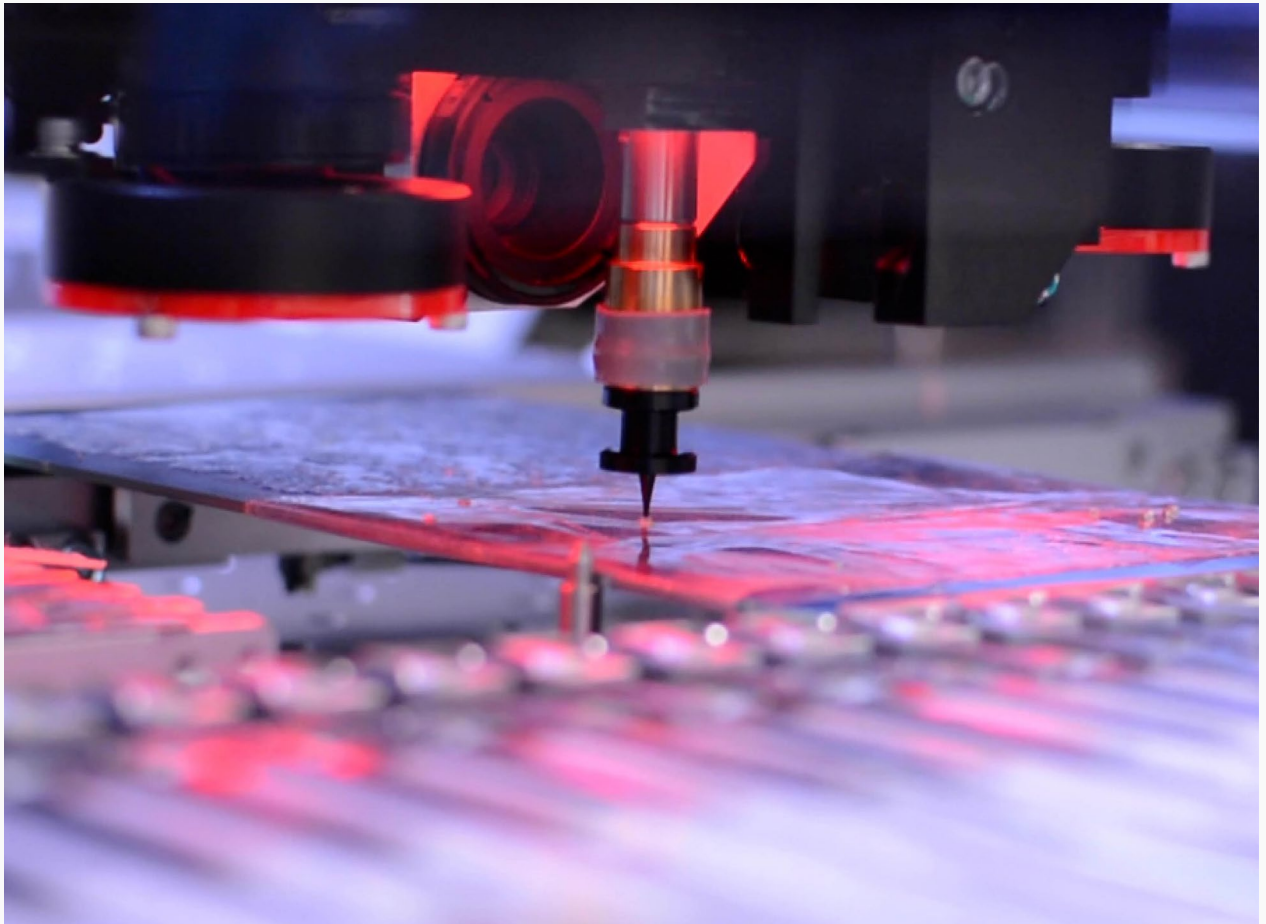

## Condition Sensor Products

Brewer Science integrates a variety of sensor types and electronics into one package resulting in smart devices for a wide array of industrial applications.

Features:

- Valve monitoring
- Environmental monitoring
- Continuous real-time monitoring
- Integration with existing facility management systems
- Data transport and storage
- Flexible user interface options

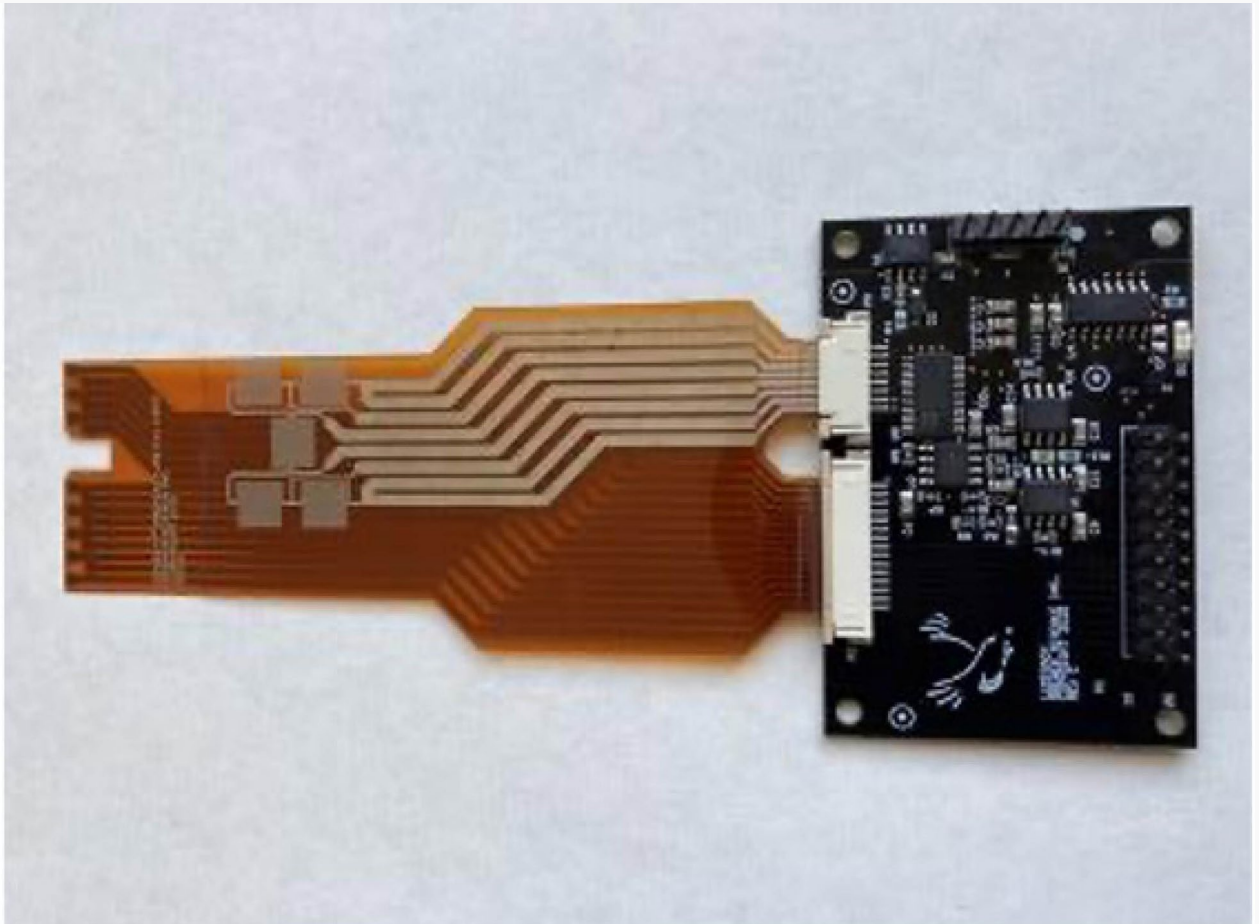

## Foundry Services

Brewer Science foundry services include pilot-scale print services with design, customized prototyping, process development, manufacturing and testing, leading to conversion to volume.

Capabilities:

- State of the Art Printing & Testing Facilities
- Process & Printing Optimization
- Sensor Integration Services
- Data Transport and Analysis
- Rapid-Turn Design to Prototype Capabilities

## Temperature Sensor Products

Brewer Science printed temperature sensors provide multi-point temperature measurements simultaneously across a defined space.

Features:

- Array configuration
- Customizable form factor
- Integrates with other sensor types
- Rapid, real-time detection of temperature
- Robust
- Features Data transport and storage; device testing and consulting
