

## Polarizers

Dye-type achromatic polarizers with excellent durability and high contrast. With high heat and light resistance this technology allows further development of applications such as Head-up displays with wide viewing angles.

## Epoxy and UV-curable Resins

Epoxy and Acrylate resins and formulations used in various fields such as color resists, solder masks, hard coatings. We also offer **Maleimide resins**, with high heat resistance and low transmission loss used in FCCL applications.

## **Cleaning Agents and Ultra-Pure Chemicals for Displays and Semiconductors**

We offer a line-up of cleaning agents and chemicals (developing solutions, bulk removers and residue removers) used for producing high performance displays, semiconductors and other electronic components.

## **Imaging Materials (by KAYAKU Advanced Materials)**

Kayaku Advanced Materials, Inc. offers a broad range of resist and ancillary products to meet almost any applications need, including our own products such as PMGI and LOR bi-layer, lift-off resists, SU-8 and KMPR<sup>®</sup> epoxy resists for various sacrificial and permanent imaging applications and PMMA resists for e-beam processing. We manufacture the PriElex<sup>®</sup> product line of functional printed electronic inks and dielectrics for flexible substrate applications 180.
